

Holly VonWald (LOGICDATA/Bear Mattress) Project – Detailed view (v1)

By Bill Weis

Requirements:

1. Be able to voice control her new LOGICDATA Silver Series TwinXL bed / Bear Mattress combination.

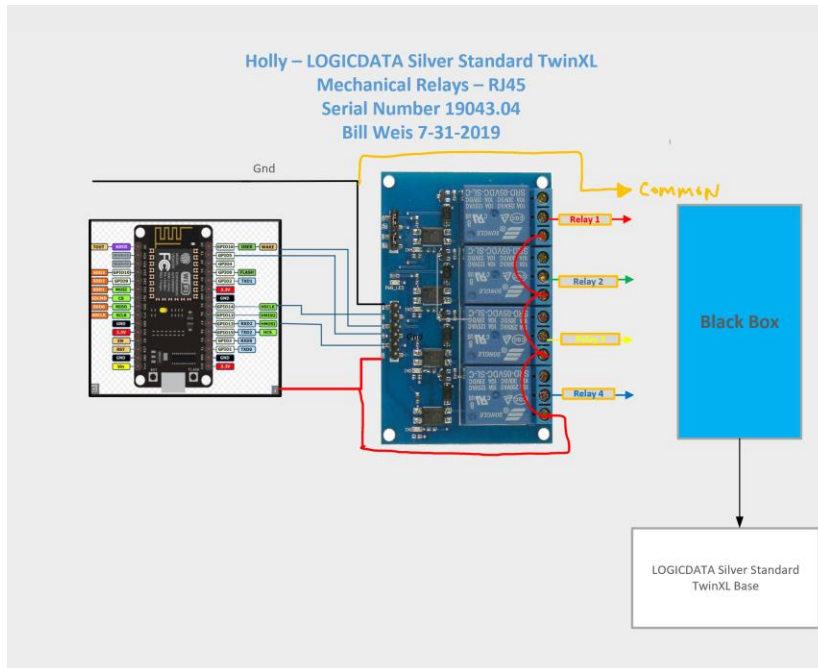

Solution – High Level:

1. Holly's old Drive bed was worn out and she needed a replacement. Through a great partnership with LOGICDATA and Bear Mattress, a concept base system was developed, and Limited Mobility Solutions provided the voice activation solution.

Details of the Solution

1 - Voice Control her bed – This project was really a wonderful example of two great companies (LOGICDATA and Bear Mattress) donating resources in a collaborative *proof of concept effort* to help change someone's life. Holly's previous adjustable bed was worn out and uncomfortable. This is what Holly said after sleeping on her new bed just one night. ***"I woke up with the least amount of lower back and hip pain I have had in months"***. She loves the Bear Mattress!

Her new LOGICDATA Silver Series TwinXL base has a Bluetooth wireless remote. Limited Mobility Solutions designed a voice activated solution for all four functions (Head Up, Head Down, Foot Up, and Foot down). For purposes of redundancy, Holly can use voice to control her bed with both the Amazon Alexa as well as the Google mini.
